PRIOR AUTHORIZATION

Synthetic document for AI field extraction test

SYNTHETIC TEST DATA ONLY - NOT A REAL PATIENT RECORD

Request information

Field	Value
Patient name	Synthetic Test Patient
Patient reference	SYN-PA-2026-001
Payer name	SYNTHETIC_TEST_PAYER
Service type	SYNTHETIC_TEST_SERVICE
Provider NPI	Not provided in this synthetic test
Diagnosis	SAMPLE-DX-001 - synthetic extraction label only; not a real diagnosis
Clinical notes	SYNTHETIC TEST TEXT. This sentence is included only to test extraction of the clinical_notes field. It does not describe a real person, symptoms, or clinical conclusion.
Prior treatments	SYNTHETIC TEST VALUE. This sentence is included only to test extraction of the prior_treatments field. It does not describe real treatment or patient history.

How to use this sample

1. Open a PA request in the Staff account and choose its payer and service from the available options.
2. Upload this PDF in the Documents stage. It is a text PDF, so the backend can extract its text without OCR.
3. Confirm the document contains synthetic or de-identified data, then run AI parsing.
4. Review the extracted values. This test document does not contain real medical facts and cannot support a clinical or payer decision.

Note: If the checklist has required fields beyond those shown here, add them to the PDF or use the matching test CSV template.
